Superior Pipeline Services Offer Post-Drilling, Emergency and Maintenance Services

November 2, 2006 – Ft. Worth, TX – Superior Pipeline Services (SPS), a leading provider of oil and gas services, specializes in post-drilling, maintenance and emergency services to gas producers in the Greater Dallas/Fort Worth, Texas region. The company now offers a wide range of services including site cleanup and grading, on-site assembly of production equipment and metering facility, construction of containment rings built around the site(s), berming and grading of drilling pits. Superior Pipeline Services also provides full construction services of the perimeter trunk system that gathers the production from a series of gas wells and enables the connection to pipeline systems that supply various gas processing facilities. Customers include energy companies that focus on the exploration, drilling and production of oil and gas in approximately eight Texas counties, centered near Fort Worth.

Gas maintenance and emergency (GME) services are also available from SPS. The maintenance offerings include fabrication and installation of measuring meters, re-routing gas pipelines, installing gas lines to housing developments and subdivisions, and upgrading, replacing and maintaining infrastructure. Time-critical, emergency-call services are provided by Superior Pipeline's 24/7 response team. In the event a gas line is inadvertently cut by a third party, the GME standby crew is able to respond immediately. SPS's on-call emergency response is available to local gas utilities and others in need of around-the-clock emergency repair services.

SPS's founder, Mr. Lynn Ayres, notes, "Superior Pipeline Services has established a reputation as a dependable, timely and extensive pipeline services provider since our inception in 2001. We have, on occasions and with only one day's notice, arrived on-site, ready to go. We're very proud of our dedicated staff and we look forward to expanding our pipeline services, to support the growth in natural gas drilling activities and to offer our emergency services and maintenance packages to our customers."
